

NEW MALARIA PREVENTION GUIDELINES FROM THE HEALTH PROTECTION AGENCY

Following the publication of their latest guidelines for GP and other travel health practices, the *Health Protection Agency* of the UK now recognises the benefits of treating your clothing with Permethrin to help prevent catching malaria.

Bugproof Clothing Treatment is the only registered permethrin based product for clothing available in the UK. It kills insects on contact.

They also recommend 50% DEET for applying to the skin when visiting malaria endemic areas.

'When DEET based repellents are applied to the skin in combination with permethrin-treated clothing, protection against bites of nearly 100% can be achieved.' *Annals of Internal Medicine, USA.*
